ESSENTIAL COMMUNICATIONS DEVICE FOR ESSENTIAL STAFF

Your business has always been under pressure: margins, employee turnover, shifting customer preferences and ever-increasing competition. Today's environment adds even more challenges; new shopping behaviors, staff shortages and increased concern for the health and safety of everyone in your business are driving the need for connectivity. To succeed, you need to deliver what the competition can't. That means quick order fulfillment, an attractive shopping environment and top-notch customer service — all while keeping your inventory secure and your staff and customers healthy and safe.

Making this happen requires your team of employees to act as one, and for that, they need instant communication. A customer request, an inventory check or a health-and-safety concern must be acted on at once. But keeping your team connected isn't easy. Smartphones with complicated apps can be a distraction, and Wi-Fi that works in the office or the breakroom may not work in a large showroom or a crowded shopping mall. The wrong radio can be frustrating, with constant chatter causing listener fatigue and poor connectivity impeding communication right when it's needed.

Fortunately, you have the right radio: the Motorola Solutions Curve. Designed specifically for retailers, the Curve radio combines simple, intuitive radio operation with advanced, Wi-Fi-enabled features that help your team stay in touch while remaining productive and focused on their work. Keep your staff connected and on-task without breaking the bank with a rugged radio that delivers cutting-edge, distraction-eliminating features in a simple, user-friendly design.

STAY FOCUSED

Curve's combination of advanced features and intuitive operation lets you keep your focus on your work, rather than your communications device. Curve integrates radio-based push-to-talk with Wi-Fi-powered cloud connectivity, giving you the best of both worlds: simple, clear, robust voice communications and advanced features with intuitive operation.

Curve's voice assistance button, which is powered by these Wi-Fi capabilities, creates easy access to many of its features from start to finish. Users can log in and out of the device using the voice assistance button after selecting a radio. When using the radio, powerful capabilities like direct person-to-person or group radio calls can be started with a simple voice command, for example: "call Patricia" or "contact Produce Department". Not only does this help you and your staff reach exactly the right person, it also avoids disturbing other staff members with unnecessary radio chatter. For times when live conversation is not needed, the Curve voice assistance button allows you to transmit and receive voicemail messages. Your team can get the message when the time is right, without interrupting an important task or customer interaction.

As a digital radio device that doesn't require a license to operate, Curve offers intuitive, easy push-to-talk communications without depending on saturated or sparse Wi-Fi networks. This focus on digital radio for voice communications allows Curve to use Wi-Fi where it's most effective: leveraging data for advanced applications that help make the radio more useful and intuitive. Curve is fully interoperable with our DTR and DLR radio series, as well as our callboxes, which helps you make the most of your existing Motorola radio fleet.

Curve's Color LED Status Indicator creates increased communication between your team and your radios. This feature provides a clear, simple method of understanding how your Curve is operating, making transparent communication even easier. Keep your team connected with voice-assisted location announcements; with Curve, managers can communicate and leave voicemails storewide. The Curve Portal keeps you connected to your device, where users can view and manage devices, employee profiles and permissions.

STAY PRODUCTIVE

Curve's ergonomic design, familiar form factor and simple push-to-talk operation make it easy to stay in touch without slowing you down. With Curve's extended range of up to 300,000 square feet*, your team can communicate even in the largest of retail spaces with connectivity extending to the warehouse and the parking lot. Within this range, choose from 10 different channel options to minimize interference and maximize productivity.

With the programmable top button, Curve also allows your team to stay productive with many of our legacy features. Direct call, call all available, private reply, scan and mute are some of the valuable features available with this button. Call All Available lets you contact only those team members not already engaged in a radio conversation using any compatible digital radio. Any team members already working on a problem won't be disrupted by your call, helping them stay on task. The Curve Portal allows you to view and monitor feature-based analytics, so you can increase visibility and productivity.
